

L3dgr Beta Program

Document ID: L3DGR-BETA-1.9

Version: 1.9

First published: July 25, 2026

Effective date: August 2, 2026

Last updated: September 11, 2026

Document type: Beta participation terms (not a legal policy)

IMPORTANT NOTICE

This document describes the L3dgr Beta program operated by Fors33, Inc. ("Fors33"). It is not legal advice and does not certify compliance with SEC Rule 17a-4(f), FDA 21 CFR Part 11, or any other regulatory framework. Beta access is complimentary during the active program when participation requirements are met. Your organization owns control design, data handling, and examiner relationships.

Program overview

The L3dgr Beta is a closed Pro-only cohort program to validate L3dgr Dashboard integrity workflows and T3thr pipeline workflows (file processor, live ingest, or scheduled jobs) with compliance-adjacent and platform teams. Lab (multiseat) beta and Hosted Continuity Burst perks are not part of this program. The active beta period is ten weeks from your checkout redemption date, followed by a two-week graduation window. Cohort intake is rolling; application deadlines and capacity are published on fors33.com/l3dgr/beta.

What we are testing

End-to-end seal workflows: preflight, confirm seal, and verify. One pipeline journey: file processor (file connector ETL), live network connector ingest, or a scheduled job (once, interval, or UTC cron) including queue behavior used in that run. Operator feedback on preflight, Readout, Jobs, file-processor error triage, live connector setup, and support-bundle export.

What beta is not

Unlimited free L3dgr Pro forever, production compliance certification, 24/7 SLA support, L3dgr Lab or Institution/Enterprise tiers, L3dgr Hosted Continuity (Burst or Always), a WORM or regulatory records archive, or a substitute for your own retention, legal hold, or counsel-approved books-and-records systems.

Benefits during beta

Complimentary L3dgr Pro access via a unique promotion code emailed after you verify your work email and your application is approved. Your code covers three monthly Pro subscription invoices at \$0, spanning the ten-week program and two-week graduation window. Onboarding

walkthrough materials. Email support with responses within two business days during the beta period.

Graduation offer

Beta graduates who complete all participation requirements (first seal, one pipeline journey, surveys, and bug report) may receive a graduation discount of 20% off year one on paid L3dgr Pro via a separate promotion code emailed after program close. Specific duration is confirmed at graduation and subject to finance approval. Graduation offers are single-use unless otherwise stated in the offer email.

Participation requirements

1. Verify your email, then complete Pro checkout within seven days of receiving your unique promotion code.
2. Complete one seal workflow: scan if needed, Dashboard Seal preflight, confirm seal, verify sealed tree.
3. Complete one pipeline journey: a file processor run, a live network ingest, or a scheduled job (once, interval, or UTC cron).
4. Submit onboarding survey (week one), week-five pulse survey, and exit survey (week ten).
5. Provide a structured bug report to l3dgr-beta@fors33.com (seal-beta@fors33.com remains an alias). Prefer attaching a support bundle exported from Help & Support in the extension (see fors33.com/l3dgr/support). Do not email production secrets, API keys, or raw file paths.

Failure to meet requirements

Day 21 without first seal: reminder email. Day 35 without first seal or without a pipeline journey: participation warning email. Day 49 if either required journey is still missing: final warning email. Day 56: entitlement revocation if either required journey is still missing. No exit survey: graduation discount may be forfeited.

Revocation

Revocation means the beta Stripe subscription may be canceled, associated L3dgr license entitlements revoked, and the beta application marked ended. Revoked participants lose complimentary beta access and may need a standard L3dgr Pro subscription to continue.

Data handling

Do not submit real PII or production secrets in feedback forms. Fors33 may collect optional technical telemetry only when you opt in via extension Settings. Beta feedback may be used in anonymized aggregate product improvement.

Redeeming your beta code

After email verification, Fors33 emails a unique single-use promotion code and checkout link for monthly L3dgr Pro. Complete Stripe checkout. Your promotion code applies a 100% discount to your first three monthly invoices (\$0 due during the discount period), covering the ten-week program and two-week graduation window. Standard Pro rates apply after the third monthly invoice unless you cancel before renewal. Cancel through fors33.com/account (Plans and Billing). Activate via fors33.com/l3dgr/setup (Key Delivery) after payment. One redemption per approved applicant.

Support

Email l3dgr-beta@fors33.com (or seal-beta@fors33.com) with your Docker Desktop build when reporting defects or participation questions. Fors33 targets email responses within two business days during the active beta period. Critical security issues may be reported to security@fors33.com.

General Fors33 product support (non-beta) remains available at support@fors33.com.
