

L3dgr Seal Beta Program

Document ID: L3DGR-SEALBETA-1.5

Version: 1.5

Effective date: July 24, 2026

Last updated: July 27, 2026

Document type: Beta participation terms (not a legal policy)

IMPORTANT NOTICE

This document describes the L3dgr Seal Beta program operated by Fors33. It is not legal advice and does not certify compliance with SEC Rule 17a-4(f), FDA 21 CFR Part 11, or any other regulatory framework. Beta access is complimentary during the active program when participation requirements are met. Your organization owns control design, data handling, and examiner relationships.

Program overview

The L3dgr Seal Beta is a closed cohort program to validate Dashboard Seal workflows with compliance-adjacent and platform teams. The active beta period is ten weeks from your checkout redemption date, followed by a two-week graduation window. Cohort intake is rolling; application deadlines and capacity are published on fors33.com/l3dgr/beta.

What we are testing

End-to-end seal workflows: preflight, confirm seal, verify, and optional remote sync. Multisat handoffs on Lab cohorts. Operator feedback on clarity of preflight, readout, and upgrade paths.

What beta is not

Unlimited free Pro forever, production compliance certification, or 24/7 SLA support.

Benefits during beta

Complimentary Pro or Lab access via a unique promotion code emailed after you verify your work email and your application is approved. Your code covers three monthly subscription invoices at \$0, spanning the ten-week program and two-week graduation window. Pro is recommended for one seat; Lab for two or more seats. Onboarding walkthrough materials. Email support with responses within two business days during the beta period.

Graduation offer

Beta graduates who complete all participation requirements (including first seal or Lab Operator exit attestation, and exit survey) may receive a graduation discount of 20% off year one on paid Pro or Lab via a separate promotion code emailed after program close. Specific eligible tiers and

duration are confirmed at graduation and subject to finance approval. Graduation offers are single-use unless otherwise stated in the offer email.

Participation requirements

1. Verify your email, then complete checkout within seven days of receiving your unique promotion code.
2. Complete one seal workflow: scan if needed, Dashboard Seal preflight, confirm seal, verify sealed tree.
3. Submit onboarding survey (week one) and exit survey (week ten).
4. Provide structured feedback at least twice during beta: once via the week-five pulse survey and once via a structured bug report to seal-beta@fors33.com.
5. Report blocking defects to seal-beta@fors33.com with reproduction steps. Prefer attaching a support bundle exported from Help & Support in the extension (see fors33.com/l3dgr/support). Do not email production secrets, API keys, or raw file paths.

Lab multiseat participants (additional)

6. Select Lab at checkout when your application indicates two or more seats. Provision at least two operator seats (for example Owner and Operator roles in your workspace). Complete one seal under an Operator role, or attest on the week-ten exit survey that an Operator completed the seal workflow on your behalf. Lab beta access includes multiseat workspace features for the entitled seat count; it does not include Institution or Enterprise tiers unless separately agreed in writing.

Failure to meet requirements

Week four without first seal: reminder email. Day thirty-five without first seal: participation warning email. Day forty-two without first seal: final warning email. Entitlement revocation forty-eight hours after the final warning if the first seal requirement is still not met. No exit survey: graduation discount may be forfeited.

Revocation

Revocation means Fors33 may cancel your beta Stripe subscription, revoke associated L3dgr license entitlements, and mark your beta application as ended for program purposes. Revoked participants lose complimentary beta access and may need to purchase a standard subscription to continue using paid L3dgr tiers.

Data handling

Do not submit real PII or production secrets in feedback forms. Fors33 may collect optional technical telemetry only when you opt in via extension Settings. Beta feedback may be used in

anonymized aggregate product improvement.

Redeeming your beta code

After email verification, Fors33 emails a unique single-use promotion code and checkout link matched to your seat count (Pro for one seat, Lab for two or more). Complete Stripe checkout on a monthly Pro or Lab subscription. Your promotion code applies a 100% discount to your first three monthly invoices (\$0 due during the discount period), covering the ten-week program and two-week graduation window. Standard Pro or Lab rates apply after the third monthly invoice unless you cancel before renewal. Cancel through fors33.com/account (Plans and Billing). Activate via fors33.com/l3dgr/setup (Key Delivery) after payment. One redemption per approved applicant.

Support

Email seal-beta@fors33.com with your tier and Docker Desktop build when reporting defects or participation questions. Fors33 targets email responses within two business days during the active beta period. Critical security issues may be reported to security@fors33.com when that mailbox is published for your organization.

General Fors33 product support (non-beta) remains available at support@fors33.com.
