

# Fors33 Cookie Policy

**Last Updated:** March 29, 2026

**1. Technical Baseline:** This Cookie Policy outlines how Fors33 utilizes cookies, local storage, and similar tracking technologies within our website and authentication portals. By interacting with our systems, you acknowledge the deployment of these mechanisms as described below.

**2. Essential State Management:** Fors33 deploys strictly necessary cookies to maintain deterministic state across your session. These are not optional, as they are required for the core functionality of the platform. We utilize them to:

- Retain your authentication status after you log in via your operator identity.
- Route your API requests securely to the correct tenant infrastructure.
- Prevent cross-site request forgery (CSRF) and other targeted security exploits.

**3. Third-Party Authentication and Billing:** To facilitate secure access and commercial transactions, our infrastructure integrates with trusted third-party providers. These providers set their own operational cookies:

- **Authentication:** When you authenticate using Google Workspace, identity tokens are stored locally to validate your ongoing session and operator permissions.
- **Payment Processing:** Our billing gateway, Stripe, utilizes specific browser tokens to securely process your payment methods, validate fraud prevention metrics, and manage your recurring Lab or Pro tier subscriptions.

**4. Telemetry and System Health:** We utilize minimal performance tracking to monitor the health of our infrastructure. This includes logging aggregate data regarding page load times, API routing efficiency, and error rates. This telemetry data is used exclusively to optimize deterministic system performance and ensure high availability for all operators. We do not use these metrics for behavioral advertising.

**5. Operator Configuration and Control:** You retain the ability to control how your browser handles local storage and cookies. You may configure your browser to block or delete all cookies from Fors33. However, you must acknowledge that restricting

essential cookies will immediately terminate your authenticated sessions, prevent access to the Account portal, and break the operational functionality of the Services.

**6. Token Lifespan and Persistence:** We utilize both session-based and persistent storage mechanisms. Session tokens are temporary and are destroyed immediately when you close your browser. Persistent local storage is used exclusively to maintain your authenticated operator identity across multiple sessions and will remain on your device until manually cleared by you or until the cryptographic token reaches its expiration timestamp.

**7. Strict Exclusion of Targeting Cookies:** For absolute clarity, Fors33 does not deploy, utilize, or permit third-party targeting, advertising, or cross-site behavioral tracking cookies. Our local storage footprint is restricted entirely to operational necessity, authentication verification, and system security.

**8. Browser-Level Enforcement:** You have the absolute right to enforce your own local storage policies. You can configure your browser settings (including Chrome, Firefox, Safari, or Edge) to refuse all cookies or to alert you when a cookie is being set. However, enforcing a strict block on our operational cookies will degrade or completely sever your ability to access the Account portal and manage your Lab or Pro tier subscriptions.

**9. Policy Revisions and Inquiries:** Fors33 may deploy new state management technologies as our infrastructure and security requirements evolve. We will update this policy to reflect any changes to our local storage mechanisms. For specific questions regarding this policy, contact us at: [legal@fors33.com](mailto:legal@fors33.com).
